There is a land in the heart of the Marche region that has a long history of battles and conquests, rich lords who lived in castles, poor farmers who worked the lands and craftsmen who worked a thousand trades.

Over the centuries, the riches of the aristocrats and their love of beauty have combined with the works of others to produce a land of a thousand attractions: fortresses and castles, walled hamlets and townships protecting works of art from all eras, all embedded in an enchanting nature that remains so throughout the year. This is Marcabella, a land of magical splendour bathing in the Adriatic Sea to the east and defended by the Apennine massif of Monte Catria to the west. The north, bounded by the banks of the historic Metaurus river, also includes a part of the area around the ancient city of Urbino, a pearl of the Renaissance when wealthy dukes built magnificent castles to defend their territories. To the south, instead, the area is bounded by the blue waters of the Cesano river. The following pages provide a description of all that Marcabella has to offer to help you relax and enjoy your holiday and make you want to return for more.
